

Garden Design

Our goal is to blend artistry with practicality to make your garden project uniquely suited to you and your home.

The process starts with an exchange of ideas and information, as you walk around your property with a designer who will work closely with you. Your landscape could be a simple splash of color or a traditional English perennial garden planned for a dynamic succession of bloom.

Whether simple or elaborate, our commitment is to create a design that not only looks good on paper, but also gives you a garden that will flourish in our Midwestern climate and the growing conditions of your site. Our design services include a booklet made for your new garden with a plan view of the garden design and color pictures of the flowers.
